DETAILED ACTION

Allowable Subject Matter

Claims 1 – 7 are allowed.

The following is an examiner's statement of reasons for allowance:

Oppelt shows a tuning circuit comprising a series resonant circuit (33, 34 – col. 8, lines 12-14), positive and negative feedback loops (C1 and C2) and a negative resistance (where Oppelt discusses using optional resistors in parallel with C2 and in parallel with the first input 261 (e.g. C1) – col. 9, lines 9-15), but does not teach or suggest the negative resistance circuit including an inverse amplifying circuit. Oppelt shows in Figs. 5 and 6 an amplifier (26) but the amplifier show the input signal into the positive terminal with no suggestion of inverting the signal.

The prior art of Kawai (2004/0017273) submitted by the Applicant lists the Japanese filing date (July 26, 2002) but has a Japanese publication date of February 26, 2004, thus does not qualify as a prior art reference under 35 U.S.C. 102(e).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Oppelt – shows a frequency response compensating amplifier circuit.
